

## Venepuncture and Phlebotomy

---

Our Venepuncture and Phlebotomy course will equip you with essential knowledge and skills needed to perform these procedures. Led by our experienced trainers, you'll explore the relevant anatomy and physiology and practice techniques through hands-on exercises in an engaging, face-to-face learning environment.

Our course also covers contraindications to performing Venepuncture procedures, infection control measures and you will also review the potential complications that may occur, to ensure that you are fully prepared and confident to practice.

## Learning Outcomes

- Explain the reasons for venepuncture and phlebotomy.
- Describe relevant anatomy and physiology.
- Develop practical skills in venepuncture and phlebotomy.
- Discuss contraindications for performing venepuncture.
- Demonstrate correct infection control measures during the procedure.
- Describe potential complications associated with venepuncture and phlebotomy.

## Course Content

### **Module 1: Introduction to Venepuncture and Phlebotomy**

- Explain the reasons for venepuncture and phlebotomy.

### **Module 2: Anatomy and Physiology for Venepuncture**

- Describe relevant anatomy and physiology.

### **Module 3: Practical Skills Development**

- Develop practical skills in venepuncture and phlebotomy.

### **Module 4: Contraindications and Patient Assessment**

- Discuss contraindications for performing venepuncture.

## Course Content

### Module 5: Infection Control Measures

- Demonstrate correct infection control measures during the procedure.

### Module 6: Managing Complications

- Describe potential complications associated with venepuncture and phlebotomy.
